

Omnichannel Retail Sales & Inventory Analytics Dashboard

“Sales activity peaks during morning hours, while evening periods show lower engagement, indicating opportunities for targeted promotions and resource optimization.”

Peak demand occurs in morning hours → inventory and staffing should be optimized accordingly.

“The chart shows that inventory levels for top products are consistently maintained with minimal variation, while restocking quantities remain uniform. This suggests a standardized inventory strategy, but it may not fully adapt to product-specific demand fluctuations.”

Business maintains buffer stock to avoid stockouts

- Increase stock for high-demand low-stock products
- Reduce stock for low-demand high-stock products
- Implement demand-based inventory planning

“This scatter plot categorizes products based on their demand and inventory levels. Most products fall into the high-demand, high-stock category, indicating efficient inventory management. However, some high-demand products have low inventory, posing a risk of stockouts, while others show overstocking due to low demand.”

Sales & Inventory Performance Insights

1. Strong Revenue Growth Trend

- Sales show a **steady increase over months**
- Peak performance observed in **later months (Q4)**

Indicates:

Business growth and increasing demand

2. Channel Performance

- **Online channel dominates (82.25%)**
- Offline contributes only **17.75%**

Insight:

Digital channel is the primary revenue driver

3. Inventory Risk

- **1,66,048 products at risk**
- Risk percentage: **15.86%**

Meaning:

Significant portion of products may face stock issues

4. Demand vs Supply Analysis

- Majority products are **well-balanced (High Demand & High Stock)**
- Some products show:
 - High demand but low stock → **Stockout risk**
 - Low demand but high stock → **Overstock issue**

5. Peak Hour Sales Pattern

- Sales are highest during **morning hours**
- Evening shows **lower engagement**

Opportunity:

Run promotions during low-demand hours

6. Inventory Management Efficiency

- Inventory levels are **stable across products**
- Restocking is **consistent but not demand-driven**

Suggests:

Need for smarter, demand-based inventory planning

Recommendations

- **Increase stock for high-demand products**
- **Reduce overstock for low-demand items**
- **Focus on online channel growth**
- **Introduce offers during low-traffic hours**
